The wrong camera comes on in reverse.			
This is typically the result of incorrect wiring at the controller or controller power harness. Areas to look at include: Vehicle connection Camera connection(s) Controller Controller Power Harness			
		Yes	No
Step 1	Check the camera connections at the controller. Is the rear camera cable connected to the Camera 1 input?	Go to step 2	Plug the rear camera cable into the Camera 1 position and retest
Step 2	Is the Blue wire from the controllers power harness connected to reverse?	Go to step 3	Connect the blue wire to reverse and retest
Step 3	Contact your Intec Service Rep. They may ask you to return your controller and controller power harness for service.
